

Leveling a flat marker

Flat markers, also known as lawn markers, can often be challenging to see, so bringing them to their original intended height can be very helpful and is a simple process.

Remember, any work in a cemetery requires permission, be it from the family or the cemetery official. Check with your local officials to be sure you are not breaking any local or state-specific laws.

Tools needed

- Tamper
- Shovel
- Gravel

Directions

- Dig around the stone and remove it from the ground.
- Remove all loose soil and replace it with gravel.
- Tamp to pack the gravel.
- Replace the stone, and be sure to return it to its original location and at a height that can be moved directly over.
- Further, the stone will rest in the slope landscape, rather than being level.
- Add topsoil around the stone and seed with grass.
- Clean the stone.
